

SAILOR SART II

9 GHz Search And Rescue Transponder

All products from Thrane & Thrane's SAILOR product programme are designed for the rough conditions at sea and the SAILOR SART II is no exception. The SAILOR SART II is small and easy to use, offering safety in critical situations.

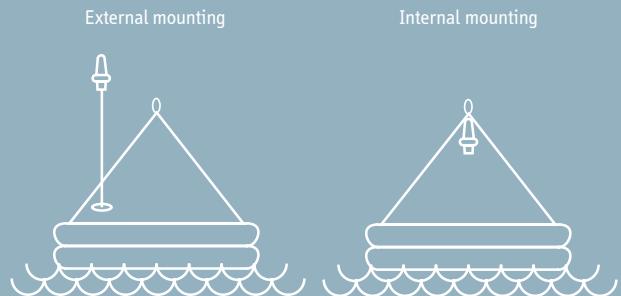

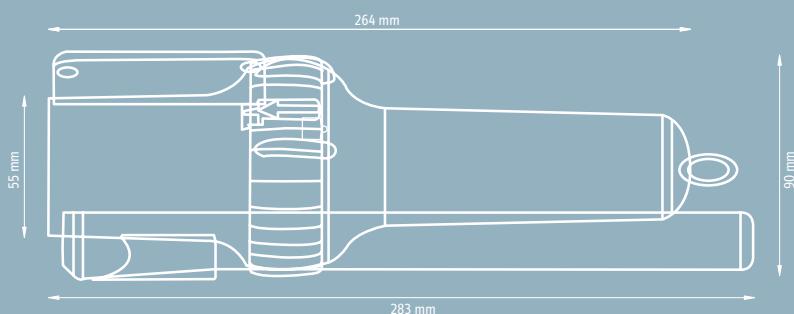

The SAILOR SART II is a 9 GHz X-band Radar transceiver and has been designed for assisting rescue operations in accordance with IMO, GMDSS requirements.

When a radar signal is received from a vessel or aircraft, the SAILOR SART II automatically transmits a response signal, which clearly identifies the survival craft on the radar screen by means of a stream of 12 in-line dots. Once activated, the SAILOR SART II will remain in standby mode for over 96 hours.

- Ship or survival craft options
- Waterproof to 10 m
- Maintenance free
- Replaceable, 5 year battery pack
- Audio/visual indication of operation
- Built-in test facility
- Integral lanyard
- Mounting options – internal/external

SAILOR[®]

Technical data

General

Receiver Response:	9.2-9.5GHz, sensitivity better than -50dBm
Transmitter Response:	12 forward and return sweeps through the range 9.2-9.5GHz Nominal sweep times 7.5µs forward and 0.4µs return Minimum recovery time following excitation, less than 10µs Response reply to receiver signal less than 0.5µs
Radiated Power (ERP):	Not less than 400mW (+26dBm)
Duration of Operation:	96 hours in standby condition followed by a minimum 8 hours of transmission while being continually interrogated with a pulse repetition frequency of 1kHz
Temperature Range:	-20°C to +55°C operational -30°C to +65°C storage
Antenna Characteristics:	Vertical beamwidth at least +/- 12.5 degree relative to the horizontal plane of the radar transponder. Azimuthal beamwidth omni-directional to +/- 2dB
Effective Antenna Height:	1 metre or greater
Weight:	530g (with mast and bracket)
Dimensions:	264 mm long x 90 mm diameter Depth with bracket 101 mm

Specifications subject to change without prior notice.

To comply with UN regulations for transportation, as of January 2003 any products containing lithium batteries will be classified as UN Hazardous Class 9.
